# Markdown support testing document

## Titles

Best used for section headers.

## Titles

## Subtitles

Best use to subsection headers.

## Subtitles

## Text Formatting

We support most markdown formatting. Simply add **\*\***, *\_*, or ~~~~~ around text to format it.

Style	How to write it	Result
Bold	<b>**bold**</b>	<b>bold</b>
Italic	<i>_italic_</i>	<i>italic</i>
Strikethrough	<del>~striketrough~</del>	<del>striketrough</del>

Here is **bold** and *italic* text.

You need to use HTML to write superscript and subscript text. That is, add `<sup>` or `<sub>` around your text.

Text Size	How to write it	Result
Superscript	<code>&lt;sup&gt;superscript&lt;/sup&gt;</code>	superscript
Subscript	<code>&lt;sub&gt;subscript&lt;/sub&gt;</code>	subscript

## Linking to Pages

You can add a link by wrapping text in `[]()`. You would write `[link to google](https://google.com)` to [link to google](https://google.com).

Links to pages in your docs need to be root-relative. Basically, you should include the entire folder path. For example, `[link to text](/writing-content/text)` links to the page “Text” in our components section.

Relative links like `[link to text](../text)` will open slower because we cannot optimize them as easily.

## Blockquotes

## Singleline

To create a blockquote, add a `>` in front of a paragraph.

Dorothy followed her through many of the beautiful rooms in her castle.

Dorothy followed her through many of the beautiful rooms in her castle.

## Multiline

Dorothy followed her through many of the beautiful rooms in her castle.  
The Witch bade her clean the pots and kettles and sweep the floor and keep the fire fed with wood.

Dorothy followed her through many of the beautiful rooms in her castle.  
The Witch bade her clean the pots and kettles and sweep the floor and keep the fire fed with wood.
